Verifier - Portable Audio Bug Detector

This is a professional portable audio bug detector is capable of detecting any conventional audio device transmitting from 30MHz – 900MHz. Detecting methods include a bar graph, audible verification and vibration making it useable in all environments. The Verifier is very easy to use and can be utilised in offices, homes and even vehicles.

The Verifier can help locate any conventional audio bugs by locking on the 'bugs' frequency and actually let you hear what is being transmitted. The Verifier has a very low power consumption so with it's built in rechargeable high capacity battery it can provide up to 8hrs continuous use.

This device is highly recommended for use by both professionals and newbie's.

Features:

- Easy to use
- 5 section RSSI bar graph
- Fully integrated speaker for output of the actual transmission
- Built in vibrator for silent alerts
- Complete with presentation box & instructions
- Slim & Compact design
